Wiimote Connections
What you can and can not do.

This is the complete list of actions you can perform in windows which will not require you to reconnect the Wiimote to the Bluetooth adapter.

What you can not do:

- Turn the Wiimote off
  - Pressing the red Power button on the Wiimote
- Removing the Bluetooth USB adapter from the USB port and ...
  - plug it into a different USB on the same computer
  - plug it into a USB port on another computer
  - plug in a different Bluetooth adapter to the same USB port
  - plug the original adapter back into the USB port it was just removed
    - NOTE: If the computer was restarted previously, this may retain the connection
- Restarting the computer when ...
  - the Bluetooth adapter is removed before or during shut down
  - the Bluetooth adapter is removed during start-up
- Doing a force restart by ...
  - unplugging the computer
  - holding the power button to turn the computer off

What you can do:

**Provided you do not do any of the previous actions.

- Restart the computer.
  - If the Bluetooth adapter is not removed from the USB port during the Restart
  - It is recommended that you restart the computer after you connect the Wiimote for the first time
- Log off one account and onto another.

In conclusion, not much is permitted besides switching accounts.
